INDEX

(Entries in **boldtype** are titles of chapter subsections.)

Aerospace Testing (11.11) 137-8
air gap, reluctance, ... 7-8
airport recording 133
amplifier output, FM 51
Amplitude Non-linearity (2.5) 22-3
Analog Modelling (11.10) 137
applications 127-38

Bandwidth Constraints (3.2) DR 42-4
Bandwidth Limitations (2.6) 23-5
bandwidth, FM, ... 49, 83
Basic Requirements (6.1) tape transports . . . 67-9
bias, magnetic excitation range, 29; in DR signal chain, 41; in FM recording, 48
bias and record level, DR 117
bias leakage, DR 119
bit-serial, bit-parallel formats, ... 34-5
byte-serial format 35

capstan, 69-71; capstan servo, 74-79, 100-101
carrier frequency, FM 48-51
center frequency, FM 120
cleaning 109-10
coating, tape 82-3, 85
coercivity 13
"constant flux" recording 42
core geometry 86, 89-90
crosstalk, between channels 93
crosstalk, DR 119
cutoff frequency, FM 49

data capture, for later analysis 127
data correlation 128
data density, 33, 37-8; DR, 44; FM, 54; HDDR, 56-9
data encloding, digital 38-40
data monitoring 128
data skew 63-5
data simulation 128
data storage formats 58-9
data translation 128
decoding, DR 65-6
delay modulation (DM-M) 39-60
demodulation, FM 48, 50-51
deviation, FM 120
Digital Measurement of Analog Signals (2.10) 33-6
digital recording 55-66
Direct Recording (2.8) 26-32
direct recording 41-6
DR Testing (10.4) 117-20
dirt, effects, distortion, FM 120
drift, DC at center frequency 122
drive excitation 87
dropout, tape, ... 83, 86
Dynamic Range Constraints (3.3), DR 43-4

eddy currents 87, 90
Electromagnetics, Relationships in (1.6) . . 16-18
Electromagnetism (1.2) 5-8
environmental stress recorders 94-5
equalizer, amplitude vs. frequency 28
Error Sources and Corrective Tactics (5.7) HDDR 66

failure, types and degrees of 104-7
fault location 107-8
feedback, DR 41
ferrite 5, 91-3
Fidelity, Attaining (2.3) 20-21
field portable recorders 96-7
filter/equalizer circuits, DR 42-3
flutter, 52-3; sources, 72-7, 101-2
flux magnetic (Φ), 5-11, 26-7; density, 6-7, 12-15; fringing, 10; leakage, 10-11; pattern, 6-11; tape to winding, 90-1.
FM recording 47-54
FM Recording of Analog Signals (2.9) 32-3
FM Testing (10.5) 120-22
frequency divider, FM 48
frequency response, DR, 42-3, 117; FM, 120

gain vs. frequency 24
gap, recording head, 30-31, 85, 87; length, 89; reluctance, 87-90
Geophysical Measurement and Exploration (11.15) 132-3
Good Practice Makes Good Recording (9.5) 109-12
group delay, FM 121
guides, tape 69

hard magnetic materials, ... 5, 13-14, 19
harmonic distortion, FM 54
HDDR (Digital) Recording (2.11) 37-40
head, ferrite vs. metal, 91-3; polarity, 115; stacks, fixed and moving, 102; wear, 91-3.
high-density digital recording (HDDR) 57
hysteresis curve, magnetic, ... 12-14

interaction anomalies (crosstalk, etc.) 25
interchannel time-displacement error (ITDE) 101, 106, 116
intermodulation distortion, DR 118
IRIG reference frequencies 42-3, 77-9
The IRIG Monolith (10.1) 113
Isolating the Fault (9.4) 107-8

laboratory recorders, large reel 95-6
linearity, DC, FM 121
logic levels 33-4

Magnetic Circuit (1.3) 8-12
magnetic circuit, analagous electrical parameters 9
magnetic field, 5-6; intensity, 9-13

Magnetic Materials (1.4) 12-14
magnetic particles, on tape 27, 82
magnetomotive force (MMF) 8-11
maintenance 105-6
Malfunctions, Three Classes (9.3) 106-7
mechanical factors, DR 44-6
Medical and Biophysical Research (11.9) . . 135-7
Miller code 39
modes, recording 24, 26-40, 90
monotonicity 34
motor control (see tape speed)

Noise (2.4) 21-2
noise, DR, 43; FM, 49-50
non-return to zero (NRZ) code 39

offset, FM signal chain 47
Open and Closed Loop Geometries (6.3) . 71-4
Operating Conditions, Typical (4.3) FM 52
Optimizing Data Density (5.3), DR 58-9
Output codes and formats 34-5
oxide, iron, 82; chromium, 85

PCM Codes (5.4) 60-61
permeability (μ) 8-15
phase-shift vs. frequency 24

portable recorders 96-7
power supplies 102
Post-Recording Signal Chain (5.6), digital recording 63–65
Pre-Recording Signal Chain (5.5) digital recording 60-63
print through 83
Process Monitoring and Data Logging (11.3) 131-2
pulse code modulation (PCM) 60-61
pulse duration modulation (PCM) 36

recalibration 109
reclocking of data streams 64
Recorder Classifications (8.2), 94-8; high environmental stress, 94-5; laboratory, 95-6; low cost, 98; portable, 96-7; selection criteria, 99-103
Record Head Design, An Example **(7.4)** . . 86-89
recording head 15-17, 30
Recording and Reproducing (2.1) 18-20
Record/Reproduce Head Design Constraints (7.3) 85-6
Reel Drive Controls (6.5) 80-81
reel packing 69
Reels, Guides, Capstans, and Rollers (6.2) . 69-71
reluctance ($\mathcal{R}$) 8-11, 86-7, 90
remanence 13
remanent ratio 85
Reproduce Head Design, An Example **(7.5)** 89-91
reproduce head 31, 42-3
Reproducing the Signal Chain (4.2), FM . . 48-52
resonance (HF), in core windings 91
retentivity 13-15, 19
return to zero (RZ) code 38
rollers 69-71

sampling 35
saturation, magnetic, 13; of tape, 89
servo tape speed, 74-9, reel, 80-81
Selection Criteria (8.3), for recorders . . . 99-103
Signal Chain (3.1),DR 41-2; **(4.1)**, FM, 47-9
signal conditioning 41
signal-to-noise ratio (S/N) 21, 43, 118, 120
Signals (2.2) 20
Signal Surveillance and Monitoring (11.6) . . 133
Simulation for Laboratory Testing (11.22) . . 138
skew, tape 74
skin effect 88
soft magnetic materials 12-14
spacing loss, tape-to-head 45, 86
Speed vs. Accuracy and Dynamic Range (4.4), FM 53
Speed vs. Data Density (3.4) DR, 44; **(4.5)**, FM, 54
spurious components, FM 120
squelch 52
Structural Analysis and Monitoring (11.4) . . 132

tachometer, tape speed control 75-77
Tape and Head Wear and Care (7.6) 91-3
tape, magnetic, 18-19; backing, coating, 82-3, 85; drop out, 66; handling, cleaning, 109–12; performance, 84-5; preservation, 68; speed, 24, 51, 115-16; storage and retrieval, 18-20; tension, 80-81; thickness, 83; transports, 67-81, 100; types and sizes, 82-4
tape servo control 75-7
Tape Speed, Selection and Regulation of (6.4) 74-7
Tape Testing (10.6) 122-5
tape-to-head error, 25; spacing, 44-6; relationships, 68
Telemetry Recording (11.8) 134-5
Test-Data Acquisition (11.7) 133-4
test tape 111
Three Classes of Malfunction (9.3) 106-7
time-base error (TBE) 25, 77, 116
Time-Domain vs. Frequency-Domain Analysis (11.2) 129-31
track density 100
transfer characteristics, DR 120
transfer level, multispeed reproduction. . . 119-20
Transport and Head Testing (10.3) 114
Types and Sizes of Tape (7.1) 82-4
Typical Performance of Instrumentation Tapes (7.2) 84-5

user convenience 103

voltage-controlled oscillator (VCO) 47

What Can Go Wrong (9.1) 104-5
What Is, and Is Not, Standard (10.2) . . . 113-14
What Usually Requires Maintenance (9.2) . 105-6
Why Digital Recording (5.1) 55-6
Why Record Signals on Magnetic Tape (11.1) 127-9
Working Calibrators in Tape Recording Systems (10.7) 125-6
working reference tape (WRT) 122
